

14500 battery cell assembly

Overview

What is a 14500 Lithium battery?

One of these such batteries, is the 14500 lithium. With the introduction of LED flashlights for example, the 14500 lithium battery has proudly placed itself among its prestigious lithium cousins. As pictured (for comparison) a 14500 lithium cell is identical in shape and size to a standard AA battery. But that's where the similarities end.

How many volts is a 14500 battery?

The voltage value for the 14500 battery is 3.7 volts, and the AA battery has 1.5 volts. The capacity for 14500 batteries is 500 to 800 mAH, the capacity for AA lithium-ion batteries is 1700 to 2700 mAH, and the alkaline AA battery capacity is 600 to 2700 mAh. The 14500 battery has a high capacity and stores more energy.

What is a 14500 Li-ion battery used for?

The 3.7V 14500 Li-Ion battery is best used for different applications. This battery comes with energy density so it can store high power in small packages. It comes with a longer cycle life so it can be recharged many times before reducing capacity. So it is used for different applications. Flashlights:..

Are 14500 and AA batteries the same?

The 14500 and AA batteries are the same but have different volts since they have different chemistries. Normally, AA batteries have alkaline, lithium, or zinc chloride chemistry. with a nominal voltage of 1.5 volts, and a rechargeable AA cell has NiMH or NiCd chemistry with a nominal voltage of 1.2 volts.

14500 battery cell assembly

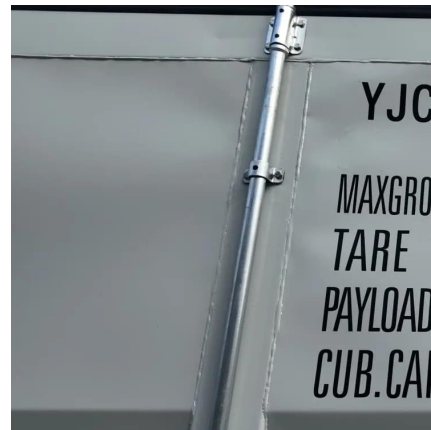

Cell Assembly

There are n steps in the cell assembly process:
Slitting, Final drying, Cutting, Winding or
Stacking, Terminal welding, Canning or Enclosing
