What does a 24V battery inverter do?

A 24V battery inverter is a device that converts 24V battery output (DC, or direct current) into 230V mains output required for domestic appliances (AC, or alternating current). It can also function as a backup / emergency power source in case of power cuts.

How much power does a 24V inverter consume?

A good sized 24V inverter could use about as much power just being on as your lights do. If the lights consume 45 watts and run for 12 hours a day, the total power usage would be 45 watts x 12 hours = 540 watts. The battery power required for losses plus the load could double that. The lights themselves may be DC, using a small transformer (wall wart) to go from 120Vac to (likely) 12Vdc.

What will I get with a 24V LiFePO4 battery?

□What you will get□ A 24 Volt 4000 watt pure sine wave inverter, two pairs of 2 ft 4AWG cables; mouting pads,30FT wired Remote,18-Months Warranty. Online intime response service,real people US support phone call . When you charge the 24V Lifepo4 battery by the solar controller,please set the solar charger current less than 29V .
