

# 24v maximum voltage of solar panel

## Overview

---

What is the voltage of a solar panel?

It is 12V or 24V. The voltage of a solar panel mainly depends on the solar panel type, size, cells, etc. Whether it be open circuit voltage, maximum power voltage, or nominal voltage, you will find it all in the datasheet of the manufacturer. Generally, the nominal voltage of any solar panel is 12V or 24V.

What is a nominal voltage solar panel?

Nominal Voltage. This is your typical voltage we put on solar panels; ranging from 12V, 20V, 24V, and 32V solar panels. Open Circuit Voltage (VOC). This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). Example: A nominal 12V voltage solar panel has an open circuit voltage of 20.88V.

How many volts is a 36 cell solar panel?

36-Cell Solar Panel Output Voltage =  $36 \times 0.58V = 20.88V$  What is especially confusing, however, is that this 36-cell solar panel will usually have a nominal voltage rating of 12V. Despite the output voltage being 18.56 volts, we still consider this a 12-volt solar panel.

What is the maximum voltage a solar panel can run?

Most solar panels have a maximum voltage between 30V and 60V, depending on size, design, and conditions. Solar panels usually max out between 30V–60V per panel, depending on size and design. Cold weather increases voltage, hot weather lowers it. Exceeding your inverter's voltage rating can damage your system.
