

# 48v hybrid energy storage inverter

## Overview

---

What is a 48V solar inverter?

A 48V solar inverter converts direct current (DC) generated by solar panels into alternating current (AC), specifically designed for 48V battery systems. Its higher voltage design minimizes energy loss during transmission, making it ideal for medium-to-high power applications such as home energy storage, small farms, or communication towers.

What is a hybrid inverter?

These inverters store excess solar energy to increase self-consumption and provide backup power. Much like solar inverters, hybrid inverters have integrated MPPTs for solar string connection and grid-isolation (islanding) function to enable the system to provide backup power during a power outage.

How does a 48V inverter work?

Some 48V inverters come integrated with charging capabilities (known as inverter chargers), offering:

- Solar Charging: Charge batteries via solar panels.
- Grid Charging: Supplement energy from the grid during low sunlight.
- Automatic Switching: Seamlessly transition between power sources for uninterrupted supply.

Can a 48V inverter charge a battery?

Compatibility: Works with lead-acid, lithium-ion, and other battery types.

Some 48V inverters come integrated with charging capabilities (known as inverter chargers), offering:

- Solar Charging: Charge batteries via solar panels.
- Grid Charging: Supplement energy from the grid during low sunlight.
