

5g base station communication mainly consists of 3 types of architectures

Overview

What are the different types of 5G NR base stations?

This article describes the different classes or types of 5G NR Base Stations (BS), including BS Type 1-C, BS Type 1-H, BS Type 1-O, and BS Type 2-O. 5G NR (New Radio) is the latest wireless cellular standard, succeeding LTE/LTE-A. It adheres to 3GPP specifications from Release 15 onwards. In 5G NR, the Base Station (BS) is referred to as a gNB.

Can a 5G base station be connected to a 4G network?

A. BS Requirements Currently there are two options for connecting fifth-generation base stations to the whole mobile network. A new cloud-based network can be deployed, either 5G BS should be connected to a 4G network (LTE or LTE Advanced Pro).

What is 5G base station architecture?

5G base station architecture is characterized by its flexibility, virtualization, and the ability to support diverse services through network slicing. The separation of CU and DU, along with the introduction of cloud-based technologies, allows for more efficient resource utilization and scalability.

Can a 5G base station be made on a fast prototyping tool?

A prototype of 5G base station can be made on the basis of various modules and tools for fast prototyping. Base station types 1-O and 2-O cannot be implemented on fast prototyping tools due to their design features.
