

# **After-sales service for earthquake-resistant off-grid solar containerized agricultural irrigation equipment**

## Overview

---

Irrigation expansion is critical for agricultural and rural development, food and nutrition security, and climate change adaptation in Sub-Saharan Africa (SSA). Lack of accessible energy for irrigation development.

Are off-grid solar-powered irrigation pumps a viable solution?

Off-grid solar-powered irrigation pumps (SIPs) can overcome many of the energy access and other challenges in the region, but their uptake has been slow.

Can solar irrigation pumps accelerate irrigation access sustainably in Sub-Saharan Africa?

Decentralized Energy Solutions like Solar Irrigation Pumps can accelerate irrigation access sustainably in Sub-Saharan Africa. Identified structural reasons which have inhibited the growth of SIP in SSA through a multi-level methodological approach.

Why are solar-powered irrigation systems so expensive in SSA?

We identify uncovered risks, lack of incentives, and lack of capacity as the key factors limiting the adoption of solar-powered irrigation. Moreover, despite significant global cost reductions, solar-powered irrigation systems remain costly in SSA due to limited market development and geographical constraints.

Is solar-powered irrigation a new theme in SSA?

As solar-powered irrigation is a relatively new theme in irrigation development in SSA, not many studies and evaluations have been conducted yet. Instead, the literature mostly consists of reports documenting small-scale experiments, pilots, and demonstrations, largely published over the last decade .

## After-sales service for earthquake-resistant off-grid solar container
