

Angola bifacial solar panels

Overview

What are bifacial solar panels?

Bifacial solar panels are different. These types of panels have solar cells on both sides, enabling them to absorb light from the front and the back. By capturing light reflected off the ground through the backside of the panel, each panel is able to produce more electricity.

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

Are bifacial solar panels suitable for rooftop installations?

Bifacial solar panels are not suitable for rooftop installations but may work well with residential ground-mounted solar systems. The ideal use case for bifacial solar panels is in commercial and utility-scale solar installations.

Are bifacial solar panels a smart upgrade?

Bifacial solar panels are a smart upgrade for anyone looking to get more energy from the same space. Since they can capture sunlight from both sides, they often produce more electricity than regular panels. They're also built to last longer and look sleeker.
