What is a monocrystalline PV panel?

The modern technology called “black silicon” is used to make monocrystalline panels. Most manufacturers focus primarily on monocrystalline panels as an efficient and modern type, but still affordable at the same time. While many see great potential in thin-film panels, rigid PV mono-modules currently have a larger scope of application.

What is the difference between monocrystalline and polycrystalline solar panels?

Monocrystalline solar panels differ from polycrystalline in the way they are produced. To make them, engineers get cells from one silicon crystal instead of melting together several of them. The difference in color between mono- and poly- panels is explained by the antireflective coating.
