

BESS battery container for energy storage in Manchester UK

Overview

What is a Bess battery?

Individual batteries form the core of the BESS system, storing electrical energy through electrochemical reactions. These batteries are typically made up of lithium-ion cells due to their high energy density and long lifespan. Cells are grouped together into modules to achieve the desired energy capacity and power output.

Could a £750m battery energy storage scheme be the world's largest?

Planning permission has been granted for a £750m battery energy storage scheme (BESS) near Manchester. Carlton Power, the independent energy-infrastructure developer behind the venture, said the 1GW facility at the Trafford Low Carbon Energy Park would be the world's largest battery-storage facility.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) or battery containers are used to store power generated by renewable energy sources such as wind and solar. BESS units play a crucial role in global carbon reduction. The UK has the largest installed offshore wind capacity in the world.

Will a £750m battery energy storage scheme help Trafford & Greater Manchester?

The council's leader, Tom Ross, said that the battery storage and green-hydrogen schemes would put Trafford and Greater Manchester "at the forefront of the UK's energy transition". Planning permission has been granted for a £750m battery energy storage scheme (BESS) near Manchester.
