

Bangkok Energy Storage Power Station Monitoring and Operation Management System

Overview

What is the operation management of pumped storage power stations?

The operations management of pumped storage power stations mainly includes power station operation, multi-energy complementarity, digital management system, profitability, and electricity consumption adjustment.

What is a battery energy storage system (BESS) control system?

Control system to enhance storage and ensure grid code compliance of your Battery Energy Storage System (BESS) power plant. The EMS is an energy management platform responsible for controlling power absorption and injection, maintaining the operational efficiency of the BESS, and ensuring its ability to provide grid support services.

How do energy management systems work?

Coordination of multiple grid energy storage systems that vary in size and technology while interfacing with markets, utilities, and customers (see Figure 1) Therefore, energy management systems (EMSs) are often used to monitor and optimally control each energy storage system, as well as to interoperate multiple energy storage systems.

Should pumped storage power stations be managed solely?

Interviews revealed that it is insufficient to solely focus on the operations management of pumped storage power stations, and there is also a need to emphasize complementarity and collaboration with other power stations of clean energy.
