

Base station power supply management solution

Overview

These solutions mainly include diesel generators, sustainable options based on renewables, and hybrid power supply (i.e., Photovoltaic (PV)-wind, PV-diesel-battery, PV-wind-diesel, and PV-fuel cell systems) and energy storage systems. Which power supply mode is used for micro base station?

For the micro base station, all-Pad power supply mode is used, featuring full high efficiency, full self-cooling and smooth upgrade for rapid deployment and site construction & operation costs reduction.

What is a base station?

This, in particular, is practical for remote telecommunication applications where, through the installation of Base Stations (BSs), the development of the wireless and mobile telecommunication networks can be achieved.

Why do we need a power supply management system?

This is to ensure that an effective management of energy flow can be achieved for a stable and a reliable power supply system at the lowest cost possible [107, 127]. Additionally, the complexity of the operational and control strategies increases as the configuration of the power supply system enlarges [25].

Which hybrid power supply system is used to power BS?

Presently, the most common arrangements of hybrid power supply systems that are used to power BSs are PV-wind, PV-diesel-battery, PV-wind-diesel, and PV-fuel cell systems. 2.4.2. Conventional Hybrid Power Supply Systems
