

# Base station solar installation

## Overview

---

How do I install a photovoltaic system?

Follow along with the essential steps of photovoltaic systems installation, from mounting solar modules and connecting to the grid, to commissioning and regular maintenance for optimal performance.

What is the installation phase of a photovoltaic system?

The installation phase of photovoltaic (PV) systems is a critical step that involves several key activities to ensure the system operates effectively and safely. Here's a more detailed look at what this phase entails:

What does solar installation entail?

Here's a more detailed look at what this phase entails: **Mounting the Solar Modules:** The installation begins with setting up the mounting system, which can be done on rooftops or on ground-mounted structures. The choice of racking depends on several factors, including roof integrity, space, orientation, and exposure to sunlight.

How do I connect a PV system to the grid?

**Grid Interconnection Application:** Before connecting a PV system to the grid, an application must be submitted to the local utility company. This application includes detailed specifications of the PV system, such as its capacity, the type of inverter used, and the configuration of the solar array.
