

Battery air conditioning for solar container communication stations

Overview

Can a battery energy storage system fit a closed-loop air conditioner?

A leading manufacturer of battery energy storage systems contacted Kooltronic for a thermal management solution to fit its rechargeable power system. Working collaboratively with the manufacturer, Kooltronic engineers modified a closed-loop air conditioner to fit the enclosure, cool the battery compartment, and maximize system reliability.

What is a battery energy storage system?

Battery energy storage systems (BESS) ensure a steady supply of lower-cost power for commercial and residential needs, decrease our collective dependency on fossil fuels, and reduce carbon emissions for a cleaner environment.

Can battery energy storage systems be used outside?

However, the electrical enclosures that contain battery energy storage systems are often located outdoors and exposed to extreme temperatures, severe weather, humidity, dirt, and dust. Like most heat-sensitive electrical equipment, operation within hot and cold temperatures can, over time, reduce power output and longevity.

Can closed-loop enclosure cooling improve battery energy storage capacity?

Without thermal management, batteries and other energy storage system components may overheat and eventually malfunction. This whitepaper from Kooltronic explains how closed-loop enclosure cooling can improve the power storage capacities and reliability of today's advanced battery energy storage systems.
