## Overview

---

Do all batteries work with a home power inverter?

Not all batteries work equally well with every type of home power inverter. Ensuring compatibility between your inverter and battery is critical for a successful energy storage system. For off-grid inverter systems, lead-acid batteries are often the go-to choice due to their affordability and long-established use.

What kind of batteries do inverters use?

Its modular and stackable battery packs provide the storage alone but are "inverter agnostic," which is the industry's way of saying they work with anyone. Its most popular battery is the 3.8 kWh battery module, which can be stacked and nestled next to your inverter on the wall next to your electrical panel.

Does a lithium battery work with a solar inverter?

While lithium batteries can't work with every inverter, most modern solar and off-grid inverters now offer lithium compatibility. For optimal performance in home energy stems, choose an inverter specifically designed for lithium battery or LiFePO4 battery systems, and always verify compatibility before purchasing.

Do inverters and batteries need to match?

The inverter and batteries must match in terms of voltage, capacity, and power output. If you are using a 12V battery, then the input voltage of the inverter must match the battery voltage. If the specifications of the battery and the inverter do not match, the system will not operate stably and may even damage the equipment.
