

China s energy storage container solar power generation

Overview

A 500 MW/2,000 MWh standalone battery energy storage system (BESS) in Tongliao, Inner Mongolia, has begun commercial operation following a five-month construction period, reflecting China's accelerating rollout of large-scale storage to firm and integrate high penetrations of wind and solar generation. How big is China's energy storage capacity?

The China Energy Storage Alliance said in the first half of 2025, newly commissioned novel energy storage projects in China reached 23.03 gigawatts, representing a year-on-year increase of 68 percent in power capacity.

Will China's energy storage sector continue to grow?

China's energy storage sector has experienced rapid growth over the past two years and is expected to maintain strong momentum going forward, as the country continues to expand its renewable energy capacity, said industry experts.

How much energy storage does China have in 2023?

By the end of 2023, China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage duration of 2.1 hours. The newly added installed capacity in 2023 was approximately 22.6GW / 48.7GWh, which is three times that for 2022 (7.3GW / 15.9GWh).

How many kilowatts is China storing?

The country's power storage capacity has steadily increased this year, with over 44 million kilowatts already in operation by the end of June, up 40 percent year-on-year, the energy authority said during a news conference in Beijing.
