

Columbia USP Uninterruptible Power Supply

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Are battery-backed uninterruptible power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptible power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.

How to choose the right uninterruptible power supply?

As a result, the demands made on uninterruptible power supplies are high. When choosing the right uninterruptible power supply, particular attention should therefore be paid to longevity, energy efficiency and reliability.

What is ups power protection?

First class power protection for critical infrastructure. Highly efficient 160 -1125kVA -480V and 160 -1000kVA 400V 3 phase UPS power protection that seamlessly integrates into medium data centers, industrial or facilities applications. Trusted partner for your business continuity
