

# Commonly used solar panels

## Overview

---

What are the different types of solar panels?

Discover the six main types of solar panel, including thin-film, perovskite, and the best type for your home: monocrystalline. What kind of home do you live in?

When you're considering whether to get solar panels, it's a good idea to look into all the different types, to ensure you choose the best system for your home.

Which solar panel type is best for residential use?

Monocrystalline solar panels are the best solar panel type for residential use due to their high efficiency, compact size, and longevity. A monocrystalline solar panel's high-grade silicon composition boosts efficiency ratings to 20% on average, meaning they convert around 20% of sunlight into usable energy.

What is the most affordable solar panel type?

Designed to be lightweight and flexible, thin-film panels are often considered the most affordable solar panel type, but this is not always true and depends on the semiconductor material used.

Which type of solar panels are most efficient?

Monocrystalline solar panels are the most efficient type of solar panel currently on the market. The top monocrystalline panels now all come with 22% efficiency or higher, and manufacturers are continually raising this bar.
