

Communication 5g base station project installation

Overview

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

Which 3GPP base station supports 5G NR 5G New Radio?

The 3GPP 5G Next Generation base station which supports the 5G NR (5G New Radio). Therefore, we will setup the base station and configure it to be able to integrate the SDR, specifically, an URSPB200-mini. Quectel RM500Q-GL + Quectel 5G-M2 EVB.

Do I need a 5G module?

A 5G module will be required to test the 5G Network Setup, being able to test the association between the 5G module (with a SIM) and the gNB (base station). This module and evaluation board will be used as UE (user equipment). Warning It is crucial to work within a native python3 environment.
