

Comparison between high-voltage and diesel power generation in intelligent photovoltaic energy storage containers

Overview

What is the difference between diesel generator and PV/diesel system?

In PV/diesel system, diesel generator is used to generate power when sunlight is not accessible. Compared to a diesel-only system, PV/diesel system not only decreases the atmospheric pollutants of carbon (CO_x), sulphur (SO_x) and nitrogen (NO_x) emissions but also decreases the power generation costs.

Are solar+storage systems better than diesel gensets?

Moreover, solar+storage solutions have minimal variable costs compared to diesel. Maintenance expenses are lower, and the systems do not incur fuel costs, which contributes to a more predictable and stable LCOE. When comparing the LCOE of diesel gensets to solar+storage hybrid systems, several factors come into play.

Is a hybrid PV-diesel system better than a diesel-only power generation paradigm?

The soaring costs associated with diesel accentuates the economic impracticality of a diesel-only power generation paradigm. The simulation outcomes, encompassing costs and emissions, distinctly show the superiority of the hybrid PV-diesel system bolstered by batteries.

Is a hybrid PV/diesel power generation system a good choice?

Among different configurations, photovoltaic-diesel (PV/diesel) power generation systems are one of the most promising ones for their good performance. Owing to the complexity of the hybrid PV/diesel system, optimal balance between these two sources needs particular attention to find a good engineering solution.
