

# **Comparison of a 60kW mobile energy storage container with a battery**

## Overview

---

What is a containerized battery energy storage system?

Let's dive in! What are containerized BESS?

Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers. These systems are designed to store energy from renewable sources or the grid and release it when required. This setup offers a modular and scalable solution to energy storage.

How do I choose a Bess containerized battery energy storage system?

These containerized battery energy storage systems are widely used in commercial, industrial, and utility-scale applications. But one of the most important factors in choosing the right solution is understanding BESS container size — and how it impacts performance, cost, and scalability.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO<sub>4</sub>) combined with an intelligent 3-level battery management system (BMS);
