## Overview

What is a wind turbine inverter?

Wind inverters are units that work to convert the direct current power produced by the wind turbines into alternating current. This can be used to power systems in homes, businesses, and farmlands or exported to the electrical grid, making them one of the best renewable energy sources globally.

Which wind turbine Inverter should I Choose?

The Uno in particular is a perfect product for those with smaller wind turbines or in systems that may require more than one wind inverter. Why Choose Our Wind Turbine Inverters?

.

What is a grid connected inverter for a wind turbine?

Grid-connected inverters for wind systems are frequently sold with the wind turbine. Manufacturers specify the grid-tied inverters for their wind turbine because every turbine has a different output voltage range. One turbine may produce AC that ranges from 0 to 300 volts. Another may produce wild AC from 0 to 200 volts.

Why does an inverter shut down a wind turbine?

The inverter shuts down, in part, because it requires grid connection to determine the frequency and voltage of the AC electricity it produces. Without the connection, the inverter can't operate. In most systems, the electrical output of the wind turbine is diverted to a dump load. In others, the controller shuts down the turbine.
