Is putting solar panels on roofs a solution in Syria?

“The solution to the problem isn’t putting solar panels on roofs,” Syria’s interim Energy Minister Mohammad al-Bashir told The Associated Press. “It’s securing enough power for the families through our networks in Syria. This is what we’re trying to do.” Some of the efforts focus on simply repairing infrastructure destroyed in the war.

Is solar energy a solution to Syria's electricity crisis?

After more than thirteen years of war, Syria’s electricity crisis has only deepened, compounding the suffering of its people. The former Assad government failed to secure stable energy supplies, and as shortages worsened and fuel prices soared, the regime turned to solar energy projects as an alternative, seeking to mitigate the crisis.

Where do solar panels come from in Syria?

However, renewable energy equipment does not enter Syria easily. Four importers we spoke to confirmed that most solar panels and batteries are shipped from China to Syria through Jebel Ali Port in the UAE or, at times, the Port of Aqaba in Jordan.

Is solar energy a viable option in Syria?

As the electricity crisis worsens, solar energy is no longer just an option – it has become an unavoidable necessity. Yet the high cost of installing photovoltaic systems has pushed many Syrians to rely on subsidized loans, particularly those provided by the Renewable Energy Support Fund, which offers interest-free financing.
