## Overview

---

How has China shaped the global supply and demand of solar PV?

Government policies in China have shaped the global supply, demand and price of solar PV over the last decade. Chinese industrial policies focusing on solar PV as a strategic sector and on growing domestic demand have enabled economies of scale and supported continuous innovation throughout the supply chain.

What is the trade flow chart of the upstream photovoltaic business?

A trade flow chart of the upstream photovoltaic business was created for the years 2000 and 2023 using global trade data from the UN Comtrade database. Figure 4 illustrates the polarization shift phenomena in the upstream product trade pattern.

Are solar PV supply chains ready for a net zero pathway?

For solar PV supply chains to be able to accommodate the requirements of a net zero pathway, they will need to be scaled up in a way that ensures they are resilient, affordable and sustainable. The world will almost completely rely on China for the supply of key building blocks for solar panel production through 2025.

Are solar PV supply chains cost-competitive?

Currently, the cost competitiveness of existing solar PV manufacturing is a key challenge to diversifying supply chains. China is the most cost-competitive location to manufacture all components of the solar PV supply chain. Costs in China are 10% lower than in India, 20% lower than in the United States, and 35% lower than in Europe.
