

Dpcp base station power supply

Overview

What is a DCP Series power supply?

The DCP Series is a digital DC power supply from Adaptive Power Systems. Unlike conventional DC power supplies that use analog control loops for voltage and current control, the DCP Series uses advanced digital signal processing for enhanced performance and increased flexibility. The controller regulates voltage, current, power, internal impedance, and special application modes like PVSIm.

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to +/-12V and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.

What is a 3G base station converter?

In a 3G Base Station application, two converters are used to provide the +27V distribution bus voltage during normal conditions and power outages.

How to choose a power supply topology for a multi-output DSL converter?

Selection criteria for the power supply topology in multi-output DSL converters include requirements for performance (high efficiency and tight load and line regulation), simplicity, low cost and a small footprint with a low profile. High performance is achieved by selecting the appropriate topology and control circuit.

[Selecting the Right Supplies for Powering 5G Base Stations](#)

These tools simplify the task of selecting the right power management solutions for these devices and, thereby, provide an optimal power solution for 5G base stations components.

AC and DC Integrated Power System

Our company has developed an integrated design of distributed base station power supply system for a variety of installation environments such as corridor, shaft, and outdoor environment.
