

Energy storage anti-backflow protection device

Overview

Why should you use an anti-backflow solution for energy storage systems?

During the discharge process of industrial and commercial energy storage systems, due to power fluctuations, changes in load power consumption and other reasons, reverse flow of electrical energy may also occur. The anti-backflow solution can effectively avoid this problem and ensure the safe and efficient operation of the energy storage system.

What is a photovoltaic system with anti-backflow?

After installing a photovoltaic system with anti-backflow, the power generated by the photovoltaic is only supplied to the local load, and the power generated by the photovoltaic energy storage system can be controlled not to be sent to the grid.

Does energy storage have a backflow problem?

As the scale of global industrial and commercial electricity consumption continues to expand, industrial and commercial energy storage technology has attracted more and more attention. The backflow problem in energy storage systems has always been a problem that troubles users.

What is a backflow prevention device?

Backflow prevention devices are an important component of our drinking water protection program and are legally mandated under the New York State Sanitary Code and the Rules of the City of New York for those businesses identified as posing a risk to the public water supply. What types of properties must install backflow prevention devices?
