## Overview

---

Can a single unit test both PV and battery energy storage systems?

However, with the IT6600C, a single unit is sufficient to handle both tasks with the dual channels. Channels are fully isolated and independently controllable, enabling simultaneous testing of both PV and battery energy storage systems (Figure 4). Figure 4.

What is PV & storage & charging (PSC)?

Amid the imbalance between the rapid development of electric vehicles and charging infrastructure, the integration of solar power generation, battery energy storage and EV charging—referred to as “PV + Storage + Charging” (PSC)—is emerging as an innovative solution for building greener, safer, and more efficient EV charging stations.

What is high-rate charge/discharge testing?

High-rate charge/discharge testing is one of the most demanding aspects of storage validation, requiring real-time adjustment of control parameters to maintain thermal stability and protect against overcurrent or short-circuit events.
