Overview

What are the UL standards for energy storage systems?

UL 1973: Batteries for Use in Stationary and Motive Auxiliary Power Applications. Safety standard for modules and battery systems used in stationary energy storage systems. UL 9540, Energy Storage Systems and Equipment. Safety standard for energy storage systems used with renewable energy sources such as solar and wind.

Are energy storage codes & standards needed?

Discussions with industry professionals indicate a significant need for standards. " [1, p. 30]. Under this strategic driver, a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes & Standards (C&S) gaps.

What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards. " [1, p. 30].

The challenge in any code or standards development is to balance the goal of ensuring a safe, reliable installation without hobbling technical innovation. This hurdle can occur when the requirements are prescriptive-based as opposed to performance-based. Using the deflagration prevention topic discussed earlier, an example might be a requirement to See more on link.springer Department of Energy[PDF]
