

# **Energy storage export 2971186Z space**

## Overview

---

Why are energy storage systems undersized?

These systems are designed with undersized energy storage system capacities due to the prohibitive mass of a fully redundant system [ , ]. With a 50 kW-class solar array and electric propulsion system, even an undersized system represents capacity in the highest ranges of space heritage [43, 210].

Could space energy storage systems be derived from lunar and Martian resources?

As space exploration advances, energy systems derived from Lunar and Martian resources become ever-more important. Additively manufactured electrochemical devices and thermal wadis from regolith may be a central part of future space energy storage systems.

What are energy storage systems for space applications?

Energy storage systems for space applications have been critically reviewed and comprehensively assessed. Batteries, regenerative fuel cells, flywheels, capacitors, and thermal systems have been evaluated in the context of a space application framework.

How does mission duration affect energy storage system cyclability and shelf-life requirements?

Influence of mission duration and Power Availability Ratio (PAR) on energy storage system cyclability and shelf-life requirements. EVA Spacesuits are an example of mission profiles that demand high cyclability, due to low PAR. They only lack power availability when they are in use.
