

Energy storage investment and construction costs

Overview

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

What are the operation and maintenance costs of electrochemical energy storage systems?

The operation and maintenance costs of electrochemical energy storage systems are the labor, operation and inspection, and maintenance costs to ensure that the energy storage system can be put into normal operation, as well as the replacement costs of battery fluids and wear and tear device, which can be expressed as:

Are energy storage technologies a good investment?

Energy storage technologies can have a valuable role to play in any energy system, including those with high and low proportions of variable renewable generation.

Why is electrochemical energy storage so expensive?

The inherent physical and chemical properties of batteries make electrochemical energy storage systems suffer from reduced lifetime and energy loss during charging and discharging. These problems cause battery life curtailment and energy loss, which in turn increase the total cost of electrochemical energy storage.
