

# **Energy storage vehicle sales price**

## Overview

---

What will energy storage be like in 2024?

In 2024, the global energy storage is set to add more than 100 gigawatt-hours of capacity for the first time. The uptick will be largely driven by the growth in China, which will once again be the largest energy storage market globally.

What drives energy storage investment?

Much of the growth in energy storage investment is being driven by mandates and targeted subsidies, ranging from solar and wind co-location mandates in China, to the Inflation Reduction Act and state-level policies in the US. New support schemes are also emerging across Europe, Australia, Japan, South Korea, and Latin America.

How many gigawatts will energy storage add in 2024?

Last year's record global additions of 45 gigawatts (97 gigawatt-hours) will be followed by continued robust growth. In 2024, the global energy storage is set to add more than 100 gigawatt-hours of capacity for the first time.
