

# Fire extinguishing at an electrochemical energy storage station in the Cook Islands

## Overview

---

What are the characteristics of electrochemical energy storage power station?

2.2 Fire Characteristics of Electrochemical Energy Storage Power Station  
Electrochemical energy storage power station mainly consists of energy storage unit, power conversion system, battery management system and power grid equipment.

Are large-scale fire extinguishing experiments necessary?

Therefore, before the fire extinguishing agent is used in energy storage stations, large-scale fire extinguishing experiments are necessary to truly evaluate the effectiveness and authenticity of the fire extinguishing agents and methods.

Are electrochemical energy storage power stations dangerous?

However, with the increase of projects of the electrochemical energy storage power station year by year, some electrochemical energy storage power stations have suffered safety accidents in turn, and the fire danger has emerged gradually.

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations . Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression .

Conclusion  
The potential fire hazard of energy storage stations and lithium battery systems needs fire protection. We need to design and develop a new type of highly efficient and anti-re-combustion extinguishing agent, to drive the development of the electrochemical energy storage fire protection industry.
