

Gaborone Super Farad Capacitor Factory

Overview

What is supercapacitor gold capacitor farad capacitor?

The supercapacitor, also known as ultracapacitor or Electrical Double-Layer Capacitor □ Gold capacitor □ farad capacitor. A capacitor stores energy by means of a static charge as opposed to an electrochemical reaction. Applying a voltage differential on the positive and negative plates charges the capacitor.

What are button cell supercapacitors?

Building upon the foundation of button cell supercapacitors, these capacitors have undergone changes in packaging and materials to withstand reflow soldering peaks of up to 260°C for less than 5 seconds. They offer a wide operating temperature range from -40°C to +85°C and a voltage tolerance range from 3.6V to 5.5V.

What is the operating temperature of a supercapacitor?

Operating temperature range from -40°C to +85°C and a voltage tolerance range from 3.6V to 6.3V. These supercapacitors boast an energy density that is 8 to 10 times higher than that of EDLC (Electrochemical Double Layer Capacitors). They can withstand voltages of up to 4.2V.
