

# **Greece BESS solar container outdoor power**

## Overview

---

Does Greece need a battery energy storage system?

Greece has initiated a series of competitive tenders to bolster its energy storage infrastructure, aiming to integrate significant battery energy storage systems (BESS) into its electricity grid. These tenders are part of a broader strategy to enhance grid flexibility and support renewable energy integration.

How many MW of Bess are there in Greece?

As of early 2025, Greece has approximately 100 MW of operational BESS, comprising a small number of FTM (front-of-the-meter) projects and pilots developed prior to the 2023 tenders. Several additional systems became operational in 2024, but the bulk of large-scale storage capacity remains under development.

Which countries are getting a new battery energy storage system?

Greece is getting four new battery energy storage systems (BESS) amounting to 105 MWh, while Germany's Intilion will develop 65 MWh for Switzerland's Primeo Energie. The UK's first transmission-connected co-located solar and BESS facility has contracted a new asset manager.

Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.
