

Halgesa Mine Uses Folding Containers Three-Phase

Overview

What are the different types of mining containers?

Air-cooled containers are the most common type of mining container. They come in small to large applications and vary depending on power capabilities on site. The size of the site matters when looking into mining containers. If there is a specific output wattage the site is targeting, it's best to base your container purchase on that.

Can a Markgraf II Colliery be reused as a mine thermal energy storage?

'The reuse of the former Markgraf II colliery as a mine thermal energy storage', European Geothermal Congress 2019, 2019. *Renew. Energy*, 143 (2019) *Renew. Sustain. Energy Rev.*, 108 (2019) Underground thermal energy storage. Environmental risks and policy developments in the Netherlands and European Union *J. Struct. Geol.*, 5 (1) (1983).

Are coal mines suitable for reuse after closure?

The initial conditions of coal mines, characterized by heterogeneous rock mass properties and unfavourable permeability, present significant challenges to ensure long-term stability and suitability for reuse after closure.

Where does hypogene mineralization occur?

Hypogene mineralization is distributed within a fanning, subparallel array of subvertical hydrothermal breccia bodies with a NS to N15o W elongation, parallel to the West Fault. Supergene enrichment and oxidation are minor west of the fault, and an exotic oxide blanket occurs in the gravels to the east.
