

Heat exchange energy storage power station

Overview

Where can heat exchangers be found?

Our heat exchangers can already be found in many new energy storage systems, such as compressed air energy storage (CAES), liquid air energy storage (LAES), pumped heat energy storage (PHES), molten salt energy storage and many more. Heat from industries and buildings makes up 20% of global CO₂ emissions today and 50% of energy use.

Why do we need a heat exchanger?

Thanks to nearly 100 years of development in thermal technologies, we have a broad portfolio of heat exchangers that meet the challenges associated with all energy storage systems. The energy storage industry is competing with cheaper, subsidized gas energy. To succeed, it needs to lower costs over time.

Are heat exchangers a good option for long term energy storage?

Heat exchangers provide many benefits to long term energy storage, but more is still needed. Lastly, when Energy Storage takes off as many expect, then lots more manufacturing capacity will be required! Exciting opportunities but too many cycles?
