

High-Temperature Resistant Mobile Energy Storage Container for Scientific Research Stations

Overview

What are the different types of thermal energy storage containers?

Guo et al. [19] studied different types of containers, namely, shell-and-tube, encapsulated, direct contact and detachable and sorptive type, for mobile thermal energy storage applications. In shell-and-tube type container, heat transfer fluid passes through tube side, whereas shell side contains the PCM.

What is high-temperature energy storage?

In high-temperature TES, energy is stored at temperatures ranging from 100°C to above 500°C. High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and thermochemical storage of heat and cooling (Table 6.4).

What is a high temperature storage material?

The main technological innovation of the company relies on the developed high temperature storage material in the form of purposely produced pellets or bricks, with high heat capacity and thermal conductivity.

Which thermal energy storage materials are used in air heating systems?

Saxena et al. [89] experimentally investigated the thermal performance of an air heating system with three different thermal energy storage materials. The materials employed were granular carbon powder, paraffin wax and combination of both.
