

Household solar light yellow light always on

Overview

Why are my solar lights turning yellow?

You may notice that your solar lights have turned a yellowish color over time, making them visually unappealing. This is due to a process called oxidation, which is common for plastic exposed to the elements like sunlight and rain.

Why does my solar light not turn on after dark?

Let's start with the most common issue: the solar light doesn't turn on at all after dark. This means no power is reaching the LED. Here's how to break it down, check the cause, and apply the fix. The most common reason is a worn-out or fully discharged battery. Rechargeable batteries typically last 2-3 years or about 300-500 charge cycles.

Do solar lights stay on during the day?

Light Stays On During Daytime (Fails to Turn Off) After looking at dim lights, let's turn to another puzzling issue: a solar light that stays on even when the sun is shining. Normally, solar lights switch off during the day to conserve energy and recharge the battery.

How to clean yellowed plastic solar lights?

To clean yellowed plastic solar lights, wipe them with a dry cloth to remove any loose dust or debris. Then, dip a sponge in soapy water and gently wipe the plastic, making sure to wring out most of the water beforehand. Repeat the process, rinse the sponge, and finally pat them dry with a dry cloth.
