

# How big a battery should a 200 watt solar panel be equipped with

## Overview

---

Does a 200W solar panel need a battery?

A 200W solar panel offers various power applications from small fridges to laptops and smaller devices. But, to take advantage of the power this panel can generate in a day, you should have a battery attached. You can use a single 100ah lithium-ion battery or two 100ah lead-acid batteries wired in parallel with a 200W solar panel.

How much would 200W solar panels & batteries cost?

For a fixed panel, you would be looking at around \$230, while the portable ones would cost about \$430, while a sealed lead-acid battery would be around \$130, with a lithium-ion battery priced at around \$200. As demand for lithium-ion batteries grows, they are becoming cheaper.

What size battery do I need for a solar panel?

What size battery you need, will depend on the total power production of your solar panels. And the power output of the solar panels will depend on how many peak sun hours your location receives. Which I'll explain in a moment. Generally, for a 200 watt solar panel, you need 12v 100Ah lithium or 12v 200Ah lead-acid battery.

How much power does a 200W solar panel generate?

With five hours of solid sunlight, a 200W panel can generate 1000Wh of power daily, enough to charge a 12V battery or power other connected devices. The ability of solar panels to generate power is defined by how much direct sunlight they receive during the day. Also, there are peak hours of a generation where the power generation is much higher.
