

# How big of an inverter should I use for a 48v 1500w motor

## Overview

---

How much battery does a 1500W inverter need?

To power a 1500W inverter during a power outage at full load for three hours, the battery system needs to supply a total of 4500Wh. To determine the required battery size for your 1500W inverter, you'll need to calculate the energy required (in watt-hours) and use the appropriate battery voltage that is compatible with the inverter.

How do I determine the battery size for my 1500W inverter?

To determine the required battery size for your 1500W inverter, you'll need to calculate the energy required (in watt-hours) and use the appropriate battery voltage that is compatible with the inverter. This will help you determine the battery capacity needed to support the inverter for the desired runtime.

Does a 48v battery work with a 5000W inverter?

A 48V 100Ah lithium battery (4.8kWh) paired with a 5000W inverter works because  $48V \times 100Ah \times 1C = 4800W$ . Always account for inverter efficiency losses (typically 85-95%). For mixed AC/DC loads, sum the wattage of all devices that might run simultaneously and add a 20% buffer.

How long can a 1500W inverter run?

Accounting for rounding up, the 1500W inverter can run for approximately 4.8 hours. In conclusion, when choosing the right battery system for your 1500W inverter, it's crucial to account for factors like inverter voltage, battery capacity, and depth of discharge (DoD).
