

# How many megabits does the 5G base station speed have

## Overview

---

### How fast is 5G?

For the company's FWA service, typical download speeds currently top out at around 250 Mbps. Some companies have measured much faster 5G speeds. Japan's NTT DOCOMO achieved over 25 Gb/s during a 5G trial involving a moving vehicle. That said, it's still important to remember all the factors at play that impact speed.

### How fast is T-mobile 5G?

T-Mobile, for example, says 450 Mb/s is the average speed a user can expect; this is expected to go as high as 4 Gb/s by 2024. For the company's FWA service, typical download speeds currently top out at around 250 Mbps. Some companies have measured much faster 5G speeds.

### What is the difference between 4G & 5G?

5G excels in both areas, but the most dramatic improvements are seen in download speeds. While 4G LTE networks typically offered average download speeds in the tens of megabits per second (Mbps), 5G is engineered to reach theoretical peak download speeds of up to 10 gigabits per second (Gbps). To put that into perspective:.

### How fast will 5G internet be in 2025?

Below shows how these providers perform based on real-world 5g speed tests through Speedtest's Connectivity Report completed from January to June in 2025. You can generally expect 5G home internet speeds to fall in the 150-300 Mbps range, depending on your provider and location.

How Fast Is 5G--Really?  
Unfortunately, the answer isn't so straightforward. Actual 5G speeds depend on not only where you're located when you access the network, but other factors like the hardware you're using, the speeds the network is capable of, how many other users are sharing the 20+ Gb/s, and what type of interference is at play between you and the cell delivering See more on lifewire
