## Overview

---

How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings — not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.

How much electricity can a solar panel produce?

Next, you'll need to know how much electricity one solar panel can produce. Solar panels come in different sizes and power outputs, typically ranging from 300 to 450 watts per panel. The power output (wattage) of the panels is rated based on how much power they can generate per hour under optimal conditions.

How do I calculate how many solar panels I Need?

You can calculate how many solar panels you need by dividing your yearly electricity usage by your area's production ratio and then dividing that number by the power output of your solar panels. To put it simply:  $\text{Number of panels} = \text{annual electricity usage} / \text{production ratio} / \text{panel wattage}$ .

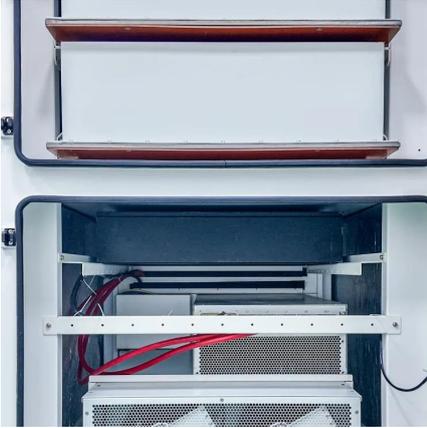

How many Watts Does a solar system produce?

GoGreenSolar offers high-performance panels that deliver power output between 335 to 405 watts. Whether you want to offset your energy bill partially or completely, we have solar kits to match your specific energy needs. Your budget often determines the size of the solar system you can afford. Solar panels are just one part of the equation.
