

How many volts should I buy for home use inverter

Overview

What size inverter do I Need?

For example, if your total load is 1200 watts, then you should consider an inverter size of 2400 watts. Let's consider an example to illustrate the process of finding the right inverter size needed to run a house. Suppose you have the following appliances with indicated power, Note: You can find this information on the label of the appliance.

How to choose the right power inverter for your home?

Choosing the right power inverter for your home involves understanding your power needs, selecting the right type and capacity, ensuring compatibility with a suitable battery, and paying attention to features and brand reliability. Inverter Store can also give a help for your selection.

What is a good inverter capacity for a house?

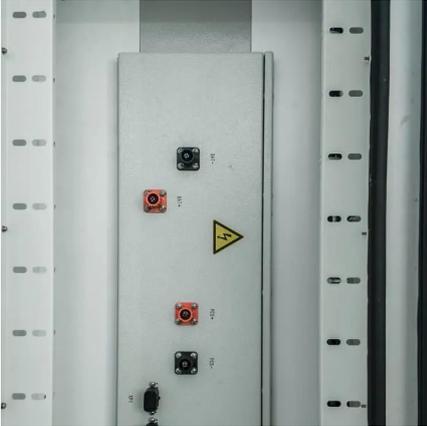

For houses, it is usually taken as 0.7. So, inverter capacity (VA) = Total power requirement (Watt) ÷ Power Factor Using the above example: Inverter capacity = $430 \div 0.7 = 614$ VA So, you must look for an inverter of around 650 VA or a little more. It is always better to keep some margin to avoid overload.

How to calculate inverter battery capacity?

Now, here is how you calculate the inverter battery capacity, = $(585 \text{ watts} \times 2 \text{ backup hours}) / (12 \text{ volts}) = 97.5$ Ah This is the ideal inverter battery capacity for your home. This is all you need to find the right inverter size for your home use.
