

# How to use distributed energy storage cabinets in parallel

## Overview

---

How many XW inverters can be used in a power distribution panel?

With Schneider, installers can use up to three XW inverters in a single power distribution panel. Both Schneider and Outback offer integrated DC power distribution panels with integrated disconnects, allowing installers to parallel several inverters, solar charge controllers, and battery cabinets if it's the most convenient for the site.

Do you need a combiner box for a solar-plus-storage system?

While smaller solar-plus-storage systems, those with one or two battery cabinets and one inverter, do not typically require a combiner box, larger systems, particularly those with more than four cabinets and more than three inverters, need a combiner box to connect all of the devices together.

Do I need a separate DC power distribution combiner?

In some cases, installers may choose to use a separate DC power distribution combiner for the battery banks, solar charge controllers, and inverters, such as Midnite Solar's MNBCB 1000. The MNBCB 1000 has an amp rating of 1000 and is an option for larger inverters with a 250 amp breaker.
