## Overview

How does lithium metal anode corrosion affect battery performance?

Valuable suggestions for future research directions on corrosion mechanisms and mitigation strategies are also provided. Lithium metal anode (LMA) corrosion accelerates capacity degradation, increases interfacial resistance, and causes performance failure in all types of LMA-based batteries (LMABs).

Does ni corrosion occur in lithium-ion batteries?

Soc. 171 081502 DOI 10.1149/1945-7111/ad6713 We present a detailed examination of Ni corrosion in lithium-ion battery Ni-coated steel cylindrical cell hardware, focusing on LiPF<sub>6</sub>-based electrolytes contaminated with water.

Does lithium-ion battery ni-coated steel cylindrical cell hardware corrode?

We present a detailed examination of Ni corrosion in lithium-ion battery Ni-coated steel cylindrical cell hardware, focusing on LiPF<sub>6</sub>-based electrolytes contaminated with water. The corrosion potential of the cell hardware is predominantly controlled by the iron component of the cylindrical can which cathodically protects the Ni coating.

How does Sei dissolution affect lithium metal batteries?

This work uncovers the SEI dissolution and its correlation with Li corrosion, enabling the durable operation of Li metal batteries by reducing the Li loss. Lithium metal electrodes suffer from both chemical and electrochemical corrosion during battery storage and operation.
