

Inverter comes out of AC combiner box

Overview

What is a PV AC combiner box?

The new PV AC combiner boxes have been designed for PV systems with string inverters in trackers or fix tilt systems. The product portfolio is suitable for inverters from 60 kW up to 200 kW and support voltages of 400 V, 690 V or 800 V AC. The combiner boxes allow to collect from 2 up to 6 string inverters in one single cabinet.

What is an AC combiner box?

In some setups, especially those involving multiple inverters, an AC combiner box is used. These boxes consolidate the AC output of multiple inverters before directing power to the main distribution board. Certain installations with unique requirements may require custom or specialized combiner boxes.

Do you need a combiner box for a solar inverter?

When optimally positioned within the solar PV system, the combiner box will help limit energy losses. Combiner boxes are required when there are more than three solar strings that need to be connected to the inverter. When working with less than three solar strings, they can be connected directly to the inverter without additional devices.

How many inverters are in a 400v/50kw AC combiner box?

Taking the AC combiner box with 4 in 1 (400V/50KW) as an example, there are a total of 4 inverters of 50KW: Label 1: The output end of the inverter is directly connected to the 4P circuit breaker. The circuit breaker can quickly cut off the fault current. The maximum AC output current of the inverter is 80A.
