

Is antimony necessary for solar glass

Overview

Does solar glass contain antimony?

However, the composition of solar glass varies, especially concerning antimony (Sb) content, depending on the production method. Antimony is used to enhance the performance of patterned solar glass but introduces environmental and health concerns, complicating recycling efforts.

Why is antimony a problem for solar glass recycling?

Currently, the import of modules from outside the EU with variable antimony content drastically complicated recycling efforts of solar glass. Indeed, antimony poses environmental and health risks and can lead to undesirable interactions with the manufacturing process. To address this issue, ESIA members are calling for:

Can antimony containing glass be recycled?

oped PV recycling technology and Antimony containing glass may be recycled without affecting its properties. The recycling process of 1 ton of PV panel is likely to produce Kg. of clean glass and 14 Kg of contaminated glass. The recycled glass can be used to produce new SPACG. However, in case there are no facilities to recycle, the opti.

Can Borosil remove antimony from solar glass?

Borosil has been able to successfully remove the Antimony from Solar glass. Institut für Solartechnik SPF, SWITZERLAND, widely considered a GOLD STANDARD for testing and certification of solar glass publishes on its website, test results of solar glass from some of the top solar glass manufacturers in the world.
