

# Is it better to use high-power solar panels

## Overview

---

Are high voltage solar panels better than low voltage?

When deciding between high voltage and low voltage solar panels, keep in mind that higher voltage systems are more efficient in general for your off-grid solar power system. A 48V system is the most efficient and cost-effective per watt-hour generated as compared to 24V and 12V systems.

Do higher voltage solar panels work?

Yes, higher voltage solar panels are designed to work on the bigger surface to efficiently capture and convert the sun's energy into useful electricity. This ability to collect more solar energy boosts their productivity, allowing them to create higher amounts of electricity in less time.

Do I need more solar panels?

Larger homes and those that use higher amounts of energy, would need more panels. Compatibility issues – Adding more panels to an existing system may not be straightforward, especially if the system is older or incompatible with newer systems.

Why are high-powered solar panels better than smaller solar panels?

Since larger panels require an equivalent amount of connections and labour compared to smaller panels, the installation cost per kW is reduced, resulting in a lower overall cost and decreased Levelized Cost of Energy (LCOE). As explained below, high-powered panels are far larger than those used on residential rooftops.
