Overview

Should storage projects be funded?

One large missing piece has been funding. Storage projects are risky investments: high costs, uncertain returns, and a limited track record. Only smart, large-scale, low-cost financing can lower those risks and clear the way for a clean future.

Courtesy of Salt River Project The U.S. energy storage industry will invest \$100 billion over the next five years to build and buy batteries made in the United States, the American Clean Power Association and company representatives said Tuesday.

Are energy storage technologies the key to reducing energy costs?

Energy storage technologies are also the key to lowering energy costs and integrating more renewable power into our grids, fast. If we can get this right, we can hold on to ever-rising quantities of renewable energy we are already harnessing – from our skies, our seas, and the earth itself. The gap to fill is very wide indeed.

What drives energy storage project development?
