

# Is there a field for micro inverters

## Overview

---

What is a microinverter?

A number of microinverters are single-stage flyback inverters that are based on the DC-DC flyback topologies. Like their name suggests, microinverters are much smaller in size and capacity than standard string inverters.

What is the global micro inverter market size?

The global micro inverter market size was estimated at USD 4.67 billion in 2024 and is projected to reach USD 17.34 billion by 2030, at a CAGR of 24.58% from 2025 to 2030. The market is experiencing steady growth, driven by the rising adoption of rooftop solar systems and the increasing emphasis on maximizing energy efficiency.

What are the different types of microinverters?

Additionally, according to the size of the system and particular applications, there are single-phase and three-phase microinverters. The former are geared toward residential applications which hold a market share of over 90%, while the latter are for commercial and industrial use. Microinverters vs. Other Inverter Technologies.

Why is the micro inverter market growing?

The market is experiencing steady growth, driven by the rising adoption of rooftop solar systems and the increasing emphasis on maximizing energy efficiency. North America held the largest revenue share of 37.74% in the global micro inverter market. The micro inverter market in the U.S. is experiencing strong momentum.
