

Is there a shortage of energy storage batteries now

Overview

Does battery supply exceed global demand?

Although battery supply may exceed demand at the global level, the picture is more nuanced and varied by region. Some countries have excess capacity—meaning more than enough to satisfy local demand—while others rely on imports to alleviate local shortages. This regional view could become critical if more countries try to localize production.

Why are Chinese battery cell manufacturers booming?

A surge in global demand for energy storage solutions is fueling a boom for Chinese battery cell manufacturers, driven by the worldwide shift toward renewable energy and accelerated by government policies, said Ye Mingyuan, an energy storage analyst at Shanghai Metals Market, an industry monitor.

Why is battery storage important?

Battery storage has many uses in power systems: it provides short-term energy shifting, delivers ancillary services, alleviates grid congestion and provides a means to expand access to electricity. Governments are boosting policy support for battery storage with more targets, financial subsidies and reforms to improve market access.

Are EVs the future of battery storage?

EVs accounted for over 90% of battery use in the energy sector, with annual volumes hitting a record of more than 750 GWh in 2023 – mostly for passenger cars. Battery storage capacity in the power sector is expanding rapidly.
